**Short Cruise Report
MARIA S. MERIAN MSM 17/3
Project: GENUS
Walvis Bay - (Walvis Bay) - Dakar
30.01.2011 - 07.03.2011**

**Chief Scientist: Niko Lahajnar
Captain: Ralf Schmidt**

Objectives

Coastal upwelling systems react directly to changes in external (climatic) forcing, and observed changes at lower trophic levels of upwelling ecosystems primarily reflect changes in this external physical forcing. In the Benguela Current coastal upwelling system off Namibia, the supply of oxygen to the shelf environment is directly coupled to hydrodynamic conditions, and fluctuating oxygen levels over the shelf have significant consequences for nutrient levels and nutrient ratios, for rates of exchange at the sediment-water interface, for gas exchange between the ocean and the atmosphere, and for biological production and therefore for the entire ecosystem. Work of expedition MARIAN S. MERIAN 17/3 in the coastal upwelling area off Namibia, funded by the BMBF and carried out within the project GENUS (**G**eochemistry and **E**cology of the **N**amibian **U**pwellin**S**ystem) was dedicated to clarify which physical processes drive the oxygen dynamics on the shelf, and what consequences arise from variations of the physical processes for biogeochemical cycles and the entire biological production and its food-web structure. The targeted working area included the weak upwelling cell offshore Walvis Bay, the Rocky Point / Kunene cell in the north and the very stable upwelling cell off Lüderitz in the south. We performed a combined oceanographic, biogeochemical, biological, and sediment sampling programme on a total of 6 transects perpendicular to the coast, which were connected with several stations between each transect. In addition, during transit time, we employed a lowered ADCP for measurements of currents and a ferrybox-system for en-route determinations of Temperature and Salinity as well as nutrient concentrations plus pCO₂ of the atmosphere and ocean surface. Station work comprised sampling in water depths between 30 and 3900 m in the working area and at three additional open-ocean stations during the transit to Dakar (Senegal) in water between 4600 and 4800 m depth.

Cruise Narrative

On January 29 2011, 21 scientists from Germany and Namibia and one observer from the Namibian Ministry of Mines and Energy boarded RV MARIA S. MERIAN for cruise MSM 17/3. For this cruise six 20' containers with scientific equipment had been sent to the harbour of embarkation in Walvis Bay, Namibia. All containers were already supplied on Jan 27 so that the cruise preparation could start as early as possible for the upcoming cruise. In addition, three airfreight cargos from Germany and Mindelo (RV METEOR), respectively, were also delivered on Jan 28.

With this successfully planned and performed cruise organisation RV MERIAN casted off from the port of Walvis Bay on Jan 30 at 08:15 local time. The first destination was a long-term mooring station on the so-called Walvis Bay transect at 23°S in approx. 130 m water depth. The ship reached this first station in the early afternoon on the same day where the mooring with oceanographic sensors as well as a sediment trap were recovered. All sensors and the sediment trap had been working according to their schedules. After their successful recovery the station was sampled using a variety of different gear such as CTD, multicorer and several types of nets (e.g., plankton net, MOCNESS, Multi-net, and Tucker Trawl). Sampling with all these gears and nets subsequently became the standard programme for the entire cruise. Later on a short-term mooring with oceanographic sensors was deployed a few miles to the west of the long-term station; it was intended to recover this mooring before

the intermediate harbour call at Walvis Bay for crew exchange. In addition to the fixed moorings a free-floating drift-system was deployed, which was equipped with oceanographic sensors as well as a sediment trap in order to sample the evolution of a specific water mass. In the morning of Jan 31 the long-term mooring recovered during the previous day was redeployed at the initial mooring station and is intended to be recovered with the local RV WELWITSCHIA in cooperation with the NatMIRC Institute in Swakopmund, Namibia.

After this successful start RV MERIAN headed south. Several stations were sampled on the short transit to 26°40'S (the Lüderitz line), which was reached on Feb 02 at noon. The Lüderitz cell is a very stable upwelling region and represents the boundary between the southern and northern Benguela system. The Lüderitz transect was sampled to a depth of 1120 m. Then the ship headed north again at the outer continental margin. The outermost station (3000 m water depth) of the Walvis Bay transect was reached on Feb 05. We then returned stepwise back to the inner shelf; in particular a very detailed physical oceanographic study with a microstructure probe was performed on a grid of 5 nautical miles. At 23°00.0'S 13°03.35'E attempts were made to locate a lost mooring, which should have been retrieved during DISCOVERY Cruise D356 in Sep 2010. However, it proved that the mooring - if still present - could not be detected using any of the ship's acoustic systems. MERIAN arrived at the final station close to Pelican Point in the evening of Feb 09.

On Feb 10 a short port call in Walvis Bay was used to exchange local and German participants. Especially the ROV group from Hamburg University boarded the ship for the second leg. MERIAN went alongside at 09:00 local time. Exactly six hours later, at 15:00 sharp, MERIAN left Walvis Bay and headed to the northern part of our study area. Our first task was to find and recover the drift-system, which had moved about 34 nautical miles to the north-west from the initial deployment position. In the evening of Feb 10 the drifter was spotted at the expected position and was recovered two hours later at about 22:00 ship time. During the following days three additional transects were sampled according to our cruise plan: Toscanini at 21°S, Terrace Bay at 20°S and Rocky Point at 19°S. On Feb 12 a first test station for the ROV was successfully conducted. Then on Feb 14 the ROV was included in the regular station work and provided us with valuable visual impressions of the local water column and ocean floor conditions. The final transect in the Namibian upwelling system was located at the nautical border with Angola off the Kunene river mouth at 17°15'S. There was clear evidence of a shift of water masses during this year's austral summer as sampling at all stations on this transect was conducted in tropical Southern Atlantic Central Water from the Angola Dome region. Altogether eight stations in water depths ranging between 30 and 3920 m were studied on this transect, including three ROV deployments. On Feb 24 at 09:45 MERIAN left the study area of the GENUS project and started her transit to Dakar. On this transit three open-water stations were scheduled in order to sample the adjacent water masses of the southern Atlantic region: (1) Centre of the Angola Dome at 10°00'S 08°00'E, approx. 4800 m water depth, which is also relevant for the Namibian upwelling region because of the poleward undercurrent; (2) Equatorial South Station at 04°09'S 01°23'W, approx. 4600 m and (3) Equatorial North Station at 03°47'N 13°58'W, approx. 4700 m water depth.

MARIA S. MERIAN then headed towards the port of disembarkation in Dakar, Senegal and went alongside on March 07 at 10:00 local time. The majority of the participants left the ship the same evening, while the remaining stayed onboard until March 08 lunch time.

Total Number of Stations: **97 (MSM #222 - #319)**

Total Number of Gears deployed/used: **569**

Total Net Station Work [days:hrs:min]: **13:16:28**

Instrument	Numbers used	Total Station Time [hours]
CTD/Rosette	79	42:15
Secchi Disk	10	0:39
Phytoplankton Net	26	1:56
Mooring Work (long-term)	2	2:06
Mooring Work (short-term)	2	0:50
Apstein Net	30	3:36
MOCNESS single	39	37:56

Acknowledgement

We would like to thank Captain Ralf Schmidt, his officers and the crew of R/V MARIA S. MERIAN for their outstanding support, the provision of a highly professional working environment and their significant contribution to the success of this cruise. All of us enjoyed the friendly, flexible and family-like atmosphere aboard during all stages of the cruise. We are indebted to the Namibian Ministry of Foreign Affairs and Ministry of Mines and Energy for their support and we would like to acknowledge the contribution of the German Ministry of Foreign Affairs (Wolfgang Mahrle and Elke Eggers) as well. We would also like to express our gratitude to the Leitstelle METEOR/MERIAN for its valuable support. The ship time of R/V MARIA S. MERIAN was provided by the Deutsche Forschungsgemeinschaft and was supported by the GENUS programme of the Federal Ministry of Education and Research.

Leitstelle Meteor/Merian

Anlage zum Short Cruise Report

Schiffsname: Maria S. Merian

Reise Nr. 17 / Abschnitt: 3 a+b

Anzahl der eingeschifften Personen insgesamt	31
davon Wissenschaftler	15
davon Techniker	8
davon Studenten	7
davon Sonstige (z.B. Journalisten, Politiker, Schüler)	-
davon Beobachter für Staat Namibia	1
davon Universitätsmitarbeiter	18
davon Mitarbeiter von außeruniversitären Forschungsinstitutionen (z.B. MPG, BSH, DOD)	12
davon Mitarbeiter von Firmen für Wissenschaft	-
davon Techniker / Service für das Schiff	-
davon Mitarbeiter ausländischer Staat Namibia	1
davon Fachgebiet physikalische Ozeanographie/ Meteorologie	3
davon Fachgebiet Biologie/Biogeochemie/Chemie	27
davon Fachgebiet Geologie/Geophysik	-
davon Andere (Fachgebiet benennen)	-
davon Frauen	17
davon Männer	14
Einsatz von Großgeräten: z.B. ROV,AUV, MeBo, Rockdrill, Kompressorcontainer	ROV (kleine Version IHF)
Einsatz von Winden und Drähten: z.B. LWL, Einleiter, Dredgedraht	Einleiterkabel 1+2 (kleiner/großer Schiebalken, Friktionswinde 1+2
