## Short Cruise Report **Maria S. Merian - MSM77**

**Longyearbyen - Edinburgh**

**15.09. - 13.10.2018**

**Chief Scientist: Dr. Thomas Soltwedel**

**Captain: Ralf Schmidt**

## **Objectives**

### **Impact of Climate Change on Arctic marine ecosystems**

To detect and track the impact of large-scale environmental changes in the transition zone between the northern North Atlantic and the central Arctic Ocean, and to determine experimentally the factors controlling deep-sea biodiversity, the Alfred-Wegener-Institute Helmholtz-Center for Polar and Marine Research (AWI) established the LTER (Long-Term Ecological Research) observatory HAUSGARTEN.

Since 2014, this observatory is successively extended within the frame of the HGF infrastructure project FRAM (Frontiers in Arctic marine Monitoring) and currently covers 21 permanent sampling sites on the West-Spitsbergen and East-Greenland slope at water depths between 250 and 5500 m. Regular sampling as well as the deployment of moorings and different free-falling systems (lander systems and bottom crawler), which act as local observation platforms, has taken place since the observatory was established back in 1999. Our research involves ecosystem compartments from the pelagic zone to the deep seafloor.

## **Narrative**

During the first week of the RV Maria S. Merian cruise MSM77, we mainly operated in eastern parts of the Fram Strait between 77°00'N and 79°30'N, and between 3°00'E and 15°00'E. Water samples were taken using a CTD/Rosette, while particles in the water column were detected with a camera system and caught with a "Marine Snow Catcher" and a short drift-mooring equipped with sediment traps. A cabled photo/video system (Ocean Floor Observation System, OFOS) was towed at 1-2 m above seafloor to study large-scale distribution patterns of epi/megafauna organisms on the seafloor. Sediments were sampled by means of a TV-guided multiple corer and a box-corer. At the central HAUSGARTEN site (79°N, 4°E), we recovered a free-falling system (bottom-lander) and an autonomous benthic crawler system deployed during RV Polarstern expeditions PS107 and PS108, respectively, in summer 2017. Another bottom-lander equipped with incubation chambers and an oxygen microprofiler was deployed for about three days at the southernmost HAUSGARTEN site S3 to study remineralisation processes at the deep seafloor. An Autonomous Underwater Vehicle (AUV) was used for physico-chemical and

biological surveys in the water column. The AUV was equipped with various sensors (e.g. CTD, ADCP, CO<sub>2</sub> and light sensors) and a water sampler. Steaming time between stations was repeatedly used for litter surveys registering floating debris at the sea surface.

During the second week of the cruise, we mainly operated in front of Kongsfjorden and off northeast and north Svalbard. Slightly impeded by the rather bad weather conditions, we continued our sampling programm in the water column and at the seafloor. On the shelf off northwestern Svalbard, a free-falling system (bottom-lander) equipped with incubation chambers and an oxygen microprofiler was deployed for about two days to study remineralisation processes at the deep seafloor. A second bottom-lander was deployed on the Vestnesa Ridge at about 1500 m water depth for a short-term test of a new experimental set-up to study effects of ocean acidification on benthic organisms. Our new autonomous benthic crawler NOMAD equipped with a microprofiler, benthic chambers and a camera system was deployed at the same site to test its performance. In-situ pumps attached to the CTD/Rosette cable were used at different water depths to detect microplastic particles in the water column. On the Svalbard shelf, the AUV was used close to the seafloor to test a new on-board multibeam system.

During the third week we worked mainly in central and northern parts of the Fram Strait. Once again we used the entire range of instruments that we had with us on this expedition. The bottom-lander carrying the acidification experiment as well as the benthic crawler TRAMPER were deployed for about one year at 1500 m and 2500 m, respectively, off Svalbard. The recovery of the two instruments is planned for the RV Polarstern cruise PS121 in summer 2019. Towards the end of the week we finally succeeded to recover our benthic crawler NOMAD, which we had deployed during the second week at 1500 m water depth on the Vestnesa Ridge off Spitsbergen. The crawler had persistently denied the dropping of its basic weight, so that the device could not independently return to the sea surface by its buoyancy. Therefore we decided to "fish" for the vehicle. For this we used our towed camera system OFOS, underneath we attached strong ropes with large hooks. Thanks to the incredible manoeuvrability of the "Maria S. Merian", which enabled us to hold the ship exactly in position and move it precisely at meter-scales (!), the ship's command and the winch operator finally managed to "pick up" the device and bring it safely back to the sea surface.

On Saturday, October 5th, we set sail for Edinburgh. A short stop over south of Jan Mayen was done to successfully recover a malfunctioning Argo-Float for colleagues at the Euro-Argo Operations Centre. The expedition ended in the afternoon of October 12th.

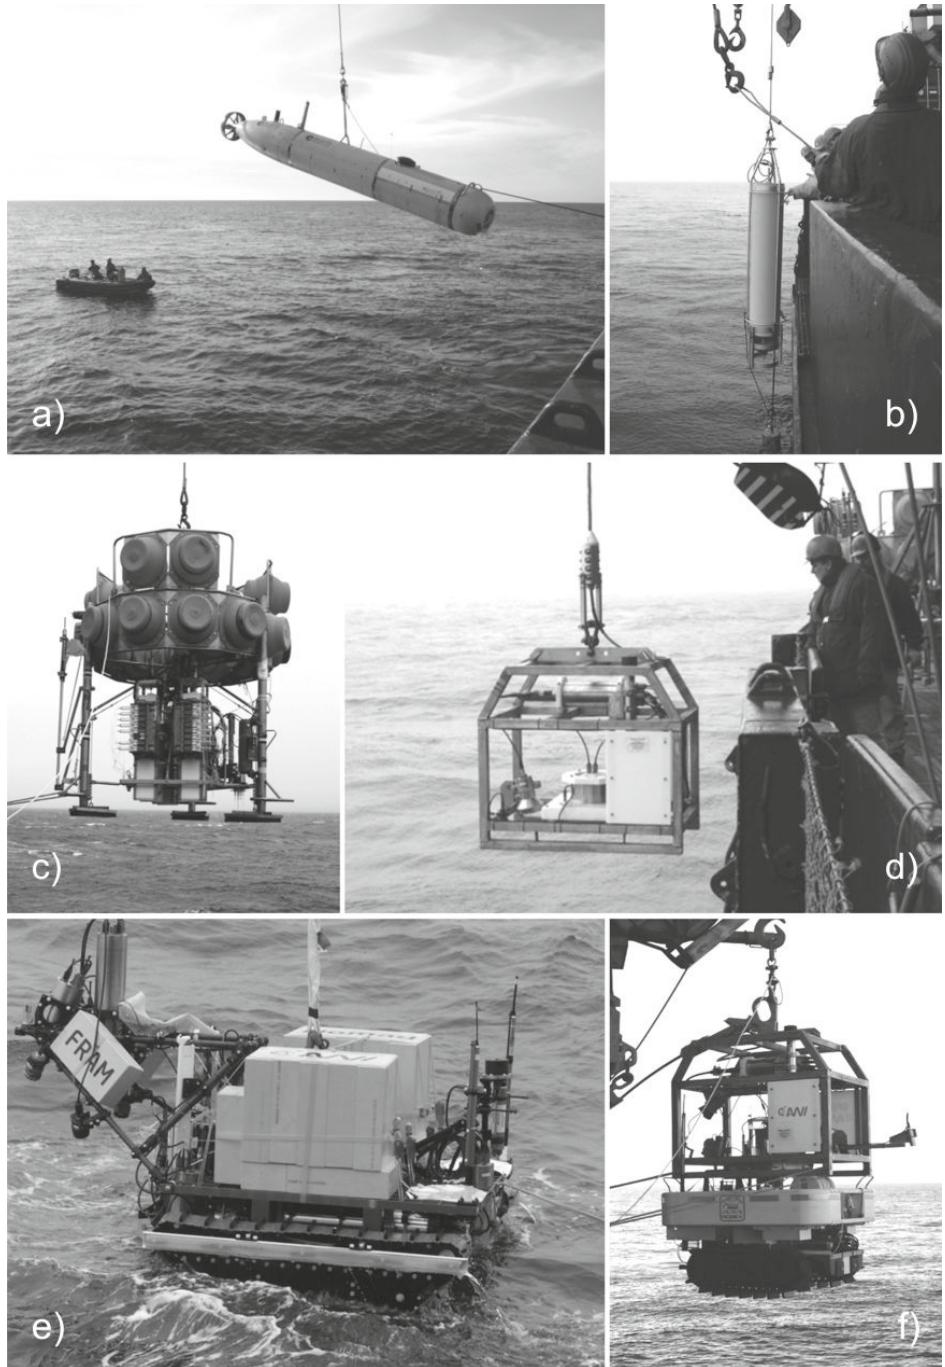

Fig. 1: Large equipment deployed during Maria S. Merian expedition MSM77:  
a) Autonomous Underwater Vehicle (AUV), b) Marine Snow Catcher (MSC),  
c) free-falling device (bottom-lander), d) towed photo/video system (Ocean Floor Observation  
System, OFOS), benthic crawler NOMAD (e) and TRAMPER (f).

## Acknowledgements

We would like to thank Captain Ralf Schmidt and his crew for their hospitality, trusting collaboration and the great atmosphere on board. Financial support for the cruise was provided through the AWI – Research-Program PACES-II (Polar Regions and Coasts in the changing Earth System) as well as through funding by the research institutes involved. We gratefully acknowledge this support.

## List of Participants

Name	Task	Institute
1. Dr. Thomas Soltwedel	Chief Scientist	AWI
2. Jana Bäger	Technician	AWI
3. Jakob Barz	Technician	MPIMM
4. Dr. Melanie Bergmann	Biologist	AWI
5. Michael Busack	Technician	AWI
6. Margarita Chikina	Biologist	IORAS
7. Jonas Hagemann	Technician	AWI
8. Dr. Christiane Hasemann	Biologist	AWI
9. Michael Hofbauer	Technician	AWI
10. Ulrich Hoge	Engineer	AWI
11. Dr. Morten Iversen	Biogeochemist	AWI
12. Melissa Käß	Biologist	AWI
13. Tania Klüver	Technician	GEOAMR
14. Christian Konrad	Technician	MARUM
15. Sascha Lehmenhecker	Engineer	AWI
16. Axel Nordhausen	Technician	MPIMM
17. Dr. Ingo Schewe	Biologist	AWI
18. Andreas Sonnek	Technician	MPIMM
19. Mine Tekman	Biologist	AWI
20. Anabel von Jackowski	Biogeochemist	AWI
21. Dr. Frank Wenzhöfer	Biogeochemist	AWI
22. Dr. Thorben Wulff	Engineer	AWI
